Fibonacci sequence function

Write a function that returns the Fibonacci sequence up to n

boundary.

Edited copilot\_test.py +12 -0

The function is in place with an iterative implementation, so it handles large bounds without recursion overhead. I'm running the focused boundary check now.

1 confirmation pending

Run zsh command?

```
python3 - <<'PY'
from copilot_test
import fibonacci_up_to

assert fibonacci_up_to
(10) == [0, 1, 1, 2, 3,
5, 8]
assert fibonacci_up_to
(0) == [0]
```

Runs tests on Fibonacci

function — checks expected outputs.
